AB Powdered Te is dissolved in HCl or HNO<sub>3</sub> and reduced with SO<sub>2</sub>, or  
 distilled or electrolyzed to contain Ag and Cu ≤0.02% each, powdered to  
 average <300 μ, and dissolved in aqueous H<sub>2</sub>O<sub>2</sub> 3-10 mols/g atom Te in  
 the presence of ≥1 of NH<sub>4</sub><sup>+</sup>, alkali metal ions, oxides, oxy acids,  
 their salts, heteropoly acids, and their salts of V, Mo, and W,  
 and HNO<sub>3</sub>. The solution is especially suitable for preparation of a heteropoly acid  
 catalyst for the oxidation of hydrocarbons. Thus, 6.4 g Te  
 <300 μ containing Cu 0.001 and Ag 0.0005% was stirred in 60 mL H<sub>2</sub>O containing  
 1.8 g NH<sub>4</sub> paramolybdate at 90° and mixed dropwise with 14.2 mL 35%  
 H<sub>2</sub>O<sub>2</sub> to obtain a clear solution in 4 min.
